

Welcome to Edstrom Industries

We design products that save time and labour. Founded in 1969 to sell automated watering systems for small animals, Edstrom Industries was soon designing technically advanced systems for animal research facilities. Today our product line includes water purification systems, vivarium management software and hardware, and preventive maintenance service. We have grown from a handful of family members working in a spare bedroom to a diverse organization of over 175 people, occupying a 10,684 square meters manufacturing and design facility.

Automated Watering System

Save labour, reduce ergonomic injuries, and improve water quality with Edstrom Watering Systems. Systems designed for all species, including mice, rats, dogs, and non-human primates. We provide complete solutions from filtration to reverse osmosis, water purification treatment, water distribution piping, and drinking valves.

Simply point and touch, ViewPort records who did what and when.

Our products provide at least two important benefits:

- 1. They save time and labor**
- 2. They improve the quality of your processes**

These benefits are realized through practical design and over 30 years of experience. We complement these benefits by providing outstanding service before and after our systems are installed. Furthermore, we have the experience and drive to innovate to better serve our customers with new technologies and new ideas.

ViewPort: Duties, Observations and Messaging

Eliminate paper duty sheets by placing touchscreen computers near animal rooms or by using handheld computers. Technicians simply point and touch the tasks they've completed, and ViewPort records who did what and when.

Watchdog Vivarium Management System

The Edstrom Watchdog System is uniquely suited for the vivarium. It integrates key vivarium systems into a common user interface, data storage system, and alarming system.

Watchdog provides control and monitoring functions for room access, lighting, automated watering systems, and monitoring of room temperature, humidity, lights, airflow, and differential pressure.

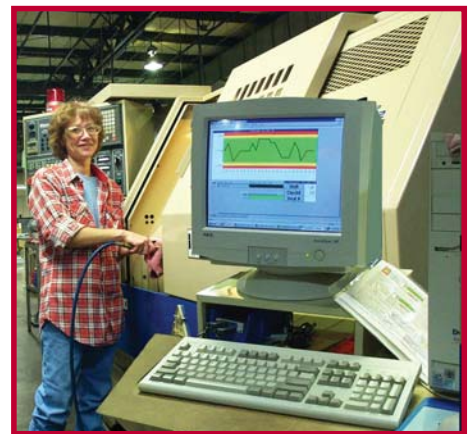

Access Watchdog from any networked computer.

We test our designs for reliability and ease of operation.

We Make What We Sell

We are committed to manufacturing and assembling our products. To control the tight tolerances that our mechanical products require, we've invested in the latest CNC machine technology. From machining, sheet metal fabrication to silicone rubber molding, and electropolishing, we have integrated all mission critical functions into our operation.

Cutting-edge machines hold tight tolerances.
